Data Structures and Algorithm

Android

Rest API

Git and Github

MVC Architecture

Projects

WhatsTheWeather App [🔗](#)

- An android app which uses **OpenWeatherMap API**
- Uses **Volley** Library to extract data from the API which is in **JSON** format
- User needs to input City name or Zip code with country code

Twitter Clone [🔗](#)

- This is a social app in which you can tweet some post just like twitter
- A user can like tweets, comment on the tweets
- I have used **Firebase Firestore** and also **Firestore Recycler View** for this app. **Glide** library for user image processing
